It is a web browser based on the source code of Firefox and Firefox for Android. It supports Multi-window browsing. The window structure is according to a more traditional desktop, which means two browser windows can be opened at the same time. However, most pages can be opened in only a single browser window. If you want to use more than one tab at the same time, go to a page with multiple tabs and right-click on the window, then you will be presented with options, such as "Open link in new tab", "Open link in new window" and "Close tab". I ditun's interface is based on the Chrome-like color scheme. If you feel Chrome's color scheme isn't good, you can opt to use the theme that looks similar to the Windows 8 or the iOS color scheme. If you like the user interface of Tor, you can change the UI of Firefox to look more like Tor, which comes with default options for themes, colors, sizes, text sizes and others.
